6. Harbor Craft [redacted] two tugs working in the area. These tugs also served as ice-breakers. A suction dredge was observed in position labeled designator D.

7. Berth [redacted]

[redacted] Quay was constructed of stone, had wooden fenders and a brick apron. [redacted] the quay is in good condition. The entire length of the quay is available for berthing. The apron is about 30' wide and about 12' above low water.

25X1

[redacted] Sheds are well-lighted and are constructed of brick with corrugated metal roofs. [redacted] railroads are accurately shown on the chart. Railroad is standard gauge and in fair condition. A spur track is laid flush with the edge of the apron. [redacted] the railroad equipment was old, but in fair operation order. There seemed to be an adequate amount of equipment available. Cargo was loaded partially from railroad cars and partially from the warehouse. Five gangs of stevedores were used. Each gang consisted of eight to 10 men, and each gang worked in three shifts of eight hours duration each. Stevedores were middle-aged and worked with fair proficiency. That portion of the cargo which was loaded from railroad cars arrived in bags. The bags were removed from the railroad cars and emptied into tubs which were carried aboard the vessel and "dumped" through the vessel's hatches. The bulk portion of the cargo, which was loaded from the warehouse, was bagged and measured before being emptied into the tubs. [redacted] 35-40 metric tons per hour could be handled by this method. Loading operations were completed at 250530I. The bags were straw-woven and small bits of straw were present in the bulk cargo. The soybeans were round pale yellow beans.
